SUMMARY

Generative AI and ML engineer (B.Tech AI & ML, graduating 2027) who ships end-to-end AI products: RAG and LLM chatbots, vision-based classification pipelines, and data-driven full-stack apps. Currently an AI Engineer building AI-integrated product features; previously AI Lead in a 20-member startup team. 3rd place, Capgemini Tech4Positive Futures Challenge. Seeking Gen AI Engineer or data roles.

EXPERIENCE

AI Engineer — Novynth Labs Pvt. Ltd. Aug 2026 – Present

- Build AI-integrated product features beyond simple automation, including conversational chatbots and AI-assisted full-stack applications developed with a spec-driven workflow and AI coding agents (Antigravity).
- Own features across the ML/data lifecycle: requirements, data handling, implementation, testing and deployment.

AI Lead — Yukti Yantra (student-founded startup, incubated at Sanjay Ghodawat University) Mar 2025 – Jul 2026

- Led the Mental Health Chatbot project end-to-end: team collaboration, documentation, progress tracking and deployment.
- Ran research, data preprocessing and performance optimization for deployed ML models across company-wide ML initiatives.
- Day-to-day contact for a New Zealand-based client on a web project, managing timelines and deliverables; tracked performance data for 20+ trainees and interns.

PROJECTS

BioVerse: Sustainability App Ecosystem — 3rd Place, Capgemini Tech4Positive Futures Challenge (Sep 2026) | React Native, Expo, Supabase

- Built a dual-module gamified platform (biodiversity citizen science and recycling) with an AI waste-classification pipeline (Gemini Flash vision model) returning confidence-scored predictions for audit-ready reporting.
- Designed a real-time pipeline (Supabase Edge Functions and Realtime) linking the consumer app to a companion logistics app, and added a Green Credit module to aggregate sustainability data for government submission.

LLM Doctor: Medical Q&A with RAG — Google Prompt Wars | FLAN-T5, LangChain

- Built a medical Q&A system reaching ~92% relevance on benchmark queries, supporting 100+ users.

Predictive Models Suite | Python, Scikit-learn

- Designed and trained predictive models with up to 85% test accuracy, covering preprocessing, evaluation and comparison.

Mindora: AI Mental Health Platform — Runner-Up, DKTE College Hackathon

- Built a tele-mental health platform with 1:1 video therapy and a 24/7 AI chatbot; extended it into an AI triage design using smartwatch biometrics (HRV, SpO_2, heart rate via Health Connect) with escalation to licensed professionals.

Final Year Project: Blockchain-Based Institutional Evidence Verification System (in progress) | React, Node/Express, PostgreSQL, Hyperledger Fabric

- Building a tamper-evident system for verifying university event and activity evidence using SHA-256 hashing, S3/MinIO storage and Hyperledger Fabric.

Voter Nexus and EcoTrace | civic tech, sustainability

- **Voter Nexus:** web platform demystifying the Indian electoral process, with a phase-aware UI, accessibility features and Google integrations (Maps, Translate, Gemini, Firebase).
- **EcoTrace:** full-stack carbon tracker for India (React, Node/Express, SQLite) with rupee-based quick logging, city-level benchmarks and a streak system.

EDUCATION

B.Tech in Artificial Intelligence & Machine Learning — Sanjay Ghodawat University, Kolhapur Final Year, Expected 2027

LEADERSHIP & EVENTS

- **Triwizathon:** led a college hackathon with 300+ on-campus participants, 700+ online registrations and 60k+ reach via Unstop.
- **Club Lead, Unstop Igniters Club:** drive student participation in hackathons; managed "Docker Decoded," a virtual AI and Docker event for 100+ participants.
- **Secretary, AIML Student Association:** coordinate workshops, speaker sessions and student-led AI events. **Google Student Ambassador** on campus.
- Qualified for Smart India Hackathon (SIH) college rounds; participated in CodeFiesta Hackathon, Jaipur.

SKILLS

Languages: Python, SQL (PostgreSQL), C/C++, Java
Gen AI & LLMs: LangChain, RAG, HuggingFace, prompt engineering, Gemini API, chatbot and agent workflows, AI coding agents
ML & Data: TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, data preprocessing, model evaluation, data visualization
Backend, Frontend & Tools: FastAPI, Node/Express, Supabase, PostgreSQL, React, React Native, Expo, Git/GitHub, Microsoft Excel
